Rating:

One of the smoothest running, most dependable and efficient 40's available. It's light weight make it an easy drop-in upgrade for any 28-35 size plane.

I replaced a finicky high performance 32 in a sport-pattern plane and got better fuel economy, lighter weight, and unlimited vertical with

set-it-and-forget-it needle settings.

My hands down

recomendation for any of the 40 size trainers available as the easy starting, rock solid dependability and crash resistance quickly make it a student's (and instructor's) best freind. So much smoother than any of the other 40 -46 sport engines out there!

Rating:

I have had one of these for a few years but havent found just the right airframe to fly it in yet. I have bench tested it and found it very flexible and powerful for its weight. Mine seems to like lighter props about 10X5 is very peppy. I have a Shukoi 30 that might be a good match , we shall see.

Another option is the SIG Kobra, it is only a .25 size plane but I understand this light weight engine might be made to fit and provide mega power in comparison to any .25 out there.

I have even heard of one being used on a SIG Wonder, if you dont know, the SIG Wonder is a .15 size plane that was apparently insane fast with the Norvel AX40
